電腦視覺(一)Homework6

R11521701 程懷恩

1. Yokoi Connectivity Number

將輸出的結果寫入 txt 後截圖

```
def DownSampling(img):
    arr = np.zeros((img.shape[0]//8+2, img.shape[1]//8+2), np.uint8)
    for i in range(1, arr.shape[0]-1):
        for j in range(1, arr.shape[1]-1):
            arr[i][j]=img[(i-1)*8][(j-1)*8]
    return arr
def Yokoi(img,i,j):
    if(img[i][j]==0):return ' '
    if(img[i-1][j-1]!=0 and img[i-1][j]!=0 and img[i-1][j+1]!=0
       and img[i][j-1]!=0 and img[i][j+1]!=0
       and img[i+1][j-1]!=0 and img[i+1][j]!=0 and img[i+1][j+1]!=0):
       return '5'
    count=0
    #right
    if(img[i][j+1]!=0):
        if(img[i-1][j]==0 or img[i-1][j+1]==0):count+=1
    if(img[i-1][j]!=0):
        if(img[i-1][j-1]==0 or img[i][j-1]==0):count+=1
    #left
    if(img[i][j-1]!=0):
        if(img[i+1][j-1]==0 or img[i+1][j]==0):count+=1
    #bottom
    if(img[i+1][j]!=0):
        if(img[i+1][j+1]==0 or img[i][j+1]==0):count+=1
    if(count==0):return '0'
    return str(count)
```

Coding:

首先 downsampling 時,將原結果之 64*64 矩陣,行列頭尾各加入一層空陣列,使得結果變為 66*66 之陣列,省去考慮邊界條件。

Yokoi 的函示將 h(b,c,d,e)求得 a1,a2,a3,a4 之結果以 count 變數紀錄,最後根據該格計算總數輸出對應編碼。
